The U.S. Economy

- The U.S. economy is growing again, with help from monetary and fiscal stimulus.

- But the strength of recovery is likely to be modest, due to a number of factors.

- With modest growth, inflation is expected to remain tame in the near term.
Third quarter GDP growth was quite positive, but was boosted by government stimulus.
Early reads on the fourth quarter show moderate growth but continued job losses.
Credit market conditions have improved but remain somewhat stressed

A list of reasons why U.S. recovery speed could be modest

- Some credit markets remain strained
- Consumers focus on repairing balance sheets and rebuilding wealth rather than spending
- Foreclosures continue to weigh on housing
- Problems in commercial real estate and general caution restraints business investment
With modest growth, inflation is expected to remain fairly moderate in coming years.

In these circumstances, the Federal Reserve will continue to employ a wide range of tools to promote economic recovery and to preserve price stability. The Committee will maintain the target range for the federal funds rate at 0 to 1/4 percent and continues to anticipate that economic conditions, including low rates of resource utilization, subdued inflation trends, and stable inflation expectations, are likely to warrant exceptionally low levels of the federal funds rate for an extended period. 

In order to promote a smooth transition in markets, the Committee will gradually slow the pace of its purchases of both agency debt and agency mortgage-backed securities and anticipates that these transactions will be executed by the end of the first quarter of 2010. The Committee will continue to evaluate the timing and overall amounts of its purchases of securities in light of the evolving economic outlook and conditions in financial markets. The Federal Reserve is monitoring the size and composition of its balance sheet and will make adjustments to its credit and liquidity programs as warranted.
The Regional Economy and Oklahoma

- As usual, our region and state entered this recession later than the nation

- Conditions in labor and housing markets remain much better than the nation

- Recent data suggest a regional and state bottom have been reached, but there are some risks to the rate of future growth
The timing of entry to this recession varied widely across the nation.

Summary

- The U.S. economy is growing again, aided by monetary and fiscal stimulus.
- Regional and Oklahoma data also suggest early signs of a recovery.
- But recovery is likely to be modest, both nationally and regionally, with energy prices a risk in the region.
